

Deep Cycle Storage batteries

Photovoltaic Solar Panels

PowerPac Systems

How important is the supply of secure managed power for your field equipment?

PowerPac delivers secure power in areas where the utility power supply is unreliable or is not available

Using a combination of generators, wind turbines and solar panels in addition to any existing utility power supply ensures that your security or communication field equipment continues to operate 24 X 7

Advanced integrated management software enables fuel levels, system status, security operational & environmental operating conditions to be managed & monitored remotely

PowerPac Systems

Service Features and Benefits

Monitoring of PowerPac can be provided via our SecureNet service for larger deployments & management console can be provided for the end user

Typical Applications :

- ✔ Town Centre Security & Communications
- ✔ Networks
- ✔ Border Control Systems
- ✔ Traffic Management Infrastructure
- ✔ Wireless Radio
- ✔ Microwave Transmission Systems
- ✔ Oil & Gas Installation
